Authentication

```
from watson_developer_cloud import VisualRecognitionV3

visual_recognition = VisualRecognitionV3(
version='{version}',
iam_apikey='{apikey}'
)
```

Classify an image

```
import json
from watson_developer_cloud import VisualRecognitionV3

visual_recognition = VisualRecognitionV3(
'2018-03-19',
iam_apikey='{iam_api_key}')

with open('./fruitbowl.jpg', 'rb') as images_file:
classes = visual_recognition.classify(
images_file,
threshold='0.6',
classifier_ids='default').get_result()
print(json.dumps(classes, indent=2))
```
