components.

Activities

Activity?

package is created.

What is an Activity?

cting with the user

What is Application class?

this file.

What is the AndroidManifest.xml

- All App components are declared in

- Declares hardware and software

features used or required by the app

- Base class that contains all other

- It is instantiated before any other class

when the process for your application/-

An activity is the entry point for intera-

Can you explain the life cycle of the

- User permissions that the app requires.

- Declares API libraries the app needs to

General Questions

This interview will have different sections. In this first part, I would like to talk about your experience and background.

Would you like to go ahead and tell me about it?

Which is the most challenging project that you have faced so far?

Did you run into any obstacles with this project and how did you handle the issue?

About the teams you have been involved in

- Were they distributed in other countries?

About the Methodology - Was it agile?

Did you usually follow all the ceremonies?

Have you ever lead a team?

Android Core

Tell all the Android application components.

Activities, Services, Broadcast Receiver, and Content Provider.

What is Context? How is it used?

- Interface to global information about an application environment.
- It allows access to application-specific resources and classes, as well as upcalls for application-level operations such as launching activities, broadcasting and receiving intents, etc.

How many contexts can you mention?

Application & Activity

It used?

How do you avoid this information to be lost?

onSavedInstanceState() - This method is used to store data before pausing the activity.

What happens when the device is rotated?

onRestoreInstanceState() - This method is used to recover the saved state of an activity when the activity is recreated after destruction.

What if I want to send info from one activity

to another?

Intents (primitive types)

But what if I want to send an Object?

Parcelable or Serializable

Can an Activity be opened from another App?

Yes, you need to add an ${\scriptstyle < \text{intent}}\,{\scriptstyle -}$

filter> element in your manifest file for the corresponding <activity> element.

Not published yet. Last updated 24th April, 2020. Page 1 of 1.

Services

What is a Service?

Long-running operations in the background

Foreground Service?

Performs some operation that is noticeable to the user

Background Service?

Performs an operation that isn't directly noticed by the user.

Bound Service?

- A bound service offers a client-server interface that allows components to interact with the service.

- bindService()
- Runs only as long as another application component is bound to it

Service vs IntentService

Service:

Block UI, Main Thread, Short tasks, Need to stop it

IntentService:

Async, Need an intent, Worker thread, Not need to stop it

What is a JobScheduler?
