

To run Java Program using Bat Script

```
@echo off  
javac *.java  
java filename  
del *.class
```

Datatype Declaration and Initialization

float f = 1.2f;	Float declaration and initialization
long l = 8_000_000_000L;	Long declaration and initialization
var v = 1;	Variable type inference

Arrays

```
//Declaration of Array Datatype.  
datatype[] variable = new datatype [20];  
//Returns Length of the array.  
variab le.l ength;  
//Sort the array.  
Arrays.so rt( var iable);  
//sort from one index to another index.  
Arrays.so rt( var iab le, fro mIn dex ,en dIn dex);  
//Binary Search in-built.  
Arrays.bi nar ySe arc h(v ari abl e,intKey);  
//Binary Search in a Specific Range.  
Arrays.bi nar ySe arc h(v ari abl e,f rom Ind ex, -  
toI nde x,intKey);  
//Converts and returns the array as String.  
Arrays.to Str ing (va riable)  
//Compare two arrays if they are same.  
Arrays.eq ual s(v ari abl e1, var iab le2);
```

Arrays

```
//Array declar ation and initia liz ation  
datatype[] variable = new datatype [20];  
//Length of the array  
variab le.l ength;  
//Sort the array  
Arrays.so rt ( v ar iable);  
//Sort from one index to another index  
Arrays.so rt ( v ar iable, fromIndex, endIndex);  
//Binary search in-built  
Arrays.bi na r y Se arc h(v ari able,  
intKey);  
//Binary search in a specific range  
Arrays.bi na r y Se arc h(v ari able,  
fromIndex, toIndex, intKey);  
//Convert and return the array as a string  
Arrays.to St r ing (va ri a ble);  
//Compare two arrays if they are the same  
Arrays.eq ual s(v ari abl e1, variab le2);
```

BigDecimal

```
//Big Integer declar ation  
BigDecimal variable = new BigDec imal ("V -  
alu e");  
//Adding two Big Integers and returning the value.  
variable3 = variab le 1.a dd (v ari ab le2);  
//Multiplying two Big Integers and returning the  
value.  
variable3 = variab le 1.m u lti pl y (v ari a ble2);  
//Subtracting two Big Integers and returning the  
value.  
variable3 = variab le 1.s ub tr act (v ari a ble2);  
//Dividing two Big Integers and returning the  
value.  
variable3 = variab le 1.d iv id e(v ari a ble2);  
//Finds if Variable1 is Max or Variable2 is.  
variable3 = variab le 1.m a x (v ari ab le2);  
//Finds if Variable1 is Min or Variable2 is.  
variable3 = variab le 1.m i n (v ari ab le2);
```
