

CMD

STRISDB	debug application (old)	RPGIII and CLP
RGZPFM	Reorgnize PF Member (Reset RRN)	
STRDBG	Debug application	RPGIII, RPGIV and CLP
OVRDBF	By using this command we can make our program to use some other file for the one actually named to be used in the program. Its also used to like rename a file with the same structure. Like CIPKG00 with the file we want to modify or read (since its not created while running the application; to make sure that the program will run) with CI99000	http://g04as-400.com/c-hapter-load.aspx?cid=541

CLRPFM	Clear all the records out of the Physical File	Update all the logicals at the same time without editing
--------	--	--

DFU

F23 -> F23	Delete record
------------	---------------

C
