CakePHP 3 Bake Cheat Sheet by Ady G (AdyG) via cheatography.com/27542/cs/8008/

CakePHP	Console	Cheat Sheet	

Details extracted from CakePHP 3.2.x command prompt.

Installation

composer require --dev cakephp/bake:~1.0

PhpStorm comes with composer built in.

To install CakePHP via PhpStorm, use the File→ New → Composer Project.

Then filter for CakePHP and select the $cakephp \app \composer$ project.

CakePHP Console

Run the CakePHP console from project root	bin/cake(<i>use bin\cakefor Windows)</i>	
Possible "shells"	bake,migrations,i18n,orm_cache, plugin,routes,server,behavior_time, console,orm	
Run Cake Server (usually on localhost port 8765)	bin/cake server	
Run migrations shell (with help)	bin/cake migrations -h	
Run bake with plugin prefix	bin/cake bake.bake -h	
A PHP CLI must be installed and in the path.		

Bake Shell Common Options

help	help or -h
Verbose output	verbose or -v
Quiet output	quiet or -q
Plugin to bake into	plugin or -p
Force overwrite of existing files	force or -f
Datasource connection to get data from (default:	connection
default)	Or - C
Theme to use when baking	theme or -t
Do not bake a test skeleton	no-test
Do not bake generic CRUD action methods	no-actions

1 These options are common to most of the cake shell commands.

Server Shell	
Run server shell with (defaults)	bin/cake server
Run server shell and get help	bin/cake serverhelp
Run server shell on port 9999	bin/cake serverport 9999
Run server shell using IP of 10.0.0.2	bin/cake serverhost 10.0.0.2
Run server shell with document root dummy/app/root	bin/cake server document_root dummy/app/root
Run server shell with verbose output	bin/cake serververbose
···· example	bin/cake -H 10.0.0.2 -p 9999 -d dummy/app/root -v
