

what is ceatography

Cheatography is a study guide tool that makes it easy to share reference material/- study guides with another person which includes what you need to learn in a quick cheatsheet. You can also view what cheatsheets other people have created. A cheatsheet is a handy and short sheet with the information you need, organized in a to-the-point format.

why was cheatography created?

Cheatography was created by Dave Child in 2005 when he posted a PHP cheat sheet on his website. People loved it, so he created another one , and yet another one , and soon he had many cheat sheets and people were emailing him for even more. So Dave decided to make a website for them, so people could access the information they need without having to go through, information they don't need.

How do you use cheatography
