

What's Physics?

Physics is... the subject of studying nature and natural phenomena.

Branches of Physics: >Mechanics

>Waves and Oscillations >Heat and Thermodynamics

>Electrodynamics >Properties of Matter and Fluid Mechanics

>Optics and Relativity >Atomic Physics

>Nuclear Physics >Electronics and Communication

>Astrophysics >Computer Science

Nature of Physical Laws

- | | | |
|---|--|--|
| i) Conservation of Mechanical Energy:
For motion due to external force, the mechanical energy is constant. | ii) Conservation of Total Energy of an Isolated System: If some of the forces are non-conservative, the mechanical energy is transformed into other forms. | iii) Conservation of Mass Plus Energy: the total (mass+energy) of the universe is conserved. |
|---|--|--|

The Fundamental Forces in Nature
