Object Creation

There are several ways to create objects in JavaScript. Here are some common methods:

1. **Object Literal:**

- You can create an object using the literal notation with curly braces `{}`.

object Literal

```
const person = {
          name:
'John',
          age: 30,
          occ upa -
tion: 'Devel oper'
       };
```
