

Docker commands Cheat Sheet by angel_ceed via cheatography.com/81998/cs/19584/

Basic Docker Commands		
docker search searchterm	Search Docker Hub for images	
docker pull user/image	Downloads an image from Docker Hub	
docker login	Authenticate to Docker Hub (or other Docker registry)	
docker push user/image	Uploads an image to Docker Hub. You must be authenticated to run this command	
docker info	Retrieves docker configuration	
docker version	Retrieves docker versioning	

Image and Container Information		
docker ps	List all running containers	
docker ps -a	List all container instances, with their ID and status	
docker images	Lists all images on the local machine	
docker history <user>/<i- mage></i- </user>	Lists the history of an image	
docker logs <container></container>	Displays the logs from a running container	
docker port <container></container>	Displays the exposed port of a running container	
docker diff <container></container>	Lists the changes made to a container	
docker logs [-f] <conta- iner></conta- 	Read container stdout	
docker top <container></container>	Show running processes	
docker inspect <conta- iner></conta- 	Show container configuration	
docker events	Show container events	
<container> can be replaced with container name or ID</container>		

Network Commands	
docker network Is	List networks
docker network inspect <network></network>	Inspect a network
docker network create <network></network>	Create a network
docker network rm <network></network>	Removes a network
docker network connect <network> <container></container></network>	Connect a container to the network
docker network connectip <ip> <network> <container></container></network></ip>	Specify the IP address of container interface
docker network disconnect <networ- k_Name> <container></container></networ- 	Disconnect container from network

<Network> can be replaced with the network ID or NAME

Work With Images and Containers		
docker run -it user/image	Runs an image, creating a container and changing the terminal to the terminal within the container	
docker run -p <hostport- >:<containerport> -d user/image</containerport></hostport- 	Run an image in detached mode with port forwarding	
docker start <container></container>	Start a container	
docker exec <container> [shell command]</container>	Executes a command within a running container, e.g. /bin/bash	
docker attach <containe-r></containe-r>	Changes the command prompt from the host to a running container	
docker stop <container></container>	Stop a container	
docker rm -f <container></container>	Delete a container	
docker create <image/> : <tag></tag>	Create image	
docker rmi <image/>	Delete an image	
docker tag <user>/<i- mage>:<tag> <user>/<i- mage>:<new tag=""></new></i- </user></tag></i- </user>	Add a new tag to an image	
ctrl+p then ctrl+q	Changes the command prompt from the host to a running container

Docker commands Cheat Sheet by angel_ceed via cheatography.com/81998/cs/19584/

Misc. Examples	
sudo docker commit <i>containterID</i> username/imagename	Commit from container to an image
docker push username/imagename	Docker push example (after logging)
docker run -it -v /host/directory:/contain- er/directory [options] <i>image</i> [command]	Mount a host directory in a Docker container
docker cp /host/directory/file.ext container./container/directory	Copy file from host machine to docker container
docker rmi \$(docker images -a -q)	Delete all Docker images
docker rm \$(sudo docker ps -a -q)	Delete all stopped containers
docker rm \$(sudo docker ps -a grep Exit cut -d ' ' -f 1)	Delete all containers in Exit state
docker save imagename > filename.tar	Export image to a file
docker load < filename.tar	Load image from file
docker [command]help	Command help

Options Keywords	
-p, —publish	Host to container port mapping
publish-all	Publish all ports
-d, —detach	Run in background
-e,env	Set env vars
-v,volume	Mount files or directories
