#### Definition of Feedback

Feedback is the information given to the learners about their performance of a learning task, academic development, etc., usually intending to improve these performances. Feedback is designed to bring about an improvement in learners' performance and achievement. Feedback can be given by the practitioner or by peers. It can be either formal or informal. It can be oral or written, it can be formative or summative, but overall it must provide the learner with specific advice on how to improve their performance.
