

### Download the Demo Plugin Template

```
$ git clone https://bitbucket.org/xnatx/xnat-template-plugin.git`
```

### Start building your own plugin project

Once you have your `build.gradle` and `settings.gradle` files, whether by copying or generating them, you can start modifying them to set up your own plugin project. There are a number of required and optional elements in your Gradle configuration, as described in the next sections.

### Start from Scratch with Gradle

```
$ gradle init
```

Type this command in the folder where you want to develop your plugin
