

Business Roles		Technology Roles		Architecture and Design Roles	
Role	Definition	Role	Definition	Role	Definition
Project Analyst	Requirements analysis for product features	Scrum Master	Agile coach and facilitator of ceremonies	Business Architect	Product capability and process architecture
Product Manager	Requirements for scope and DOD / DOR	Agility Lead	Agility metrics and standard ways of working	Solution Architect	Application functions and services design
Area Product Owner	Epic and Initiative backlog prioritization	Technical Lead	Lead systems engineer / developer	CX Design Lead	Customer user interface and feature behaviors
Product Owner	Strategic outcomes, Initiatives and Roadmap	Technology Owner	Oversight and planning of technology	Access-ibility Design	Accounts for ADA / ease of use for disability users
Head of Product	Oversight for Product Portfolio	Head of Technology	Strategy and technical organization management	Design Authority	Integration and interoperability design
Organizational roles need to be defined and socialized as part of product definition.		Technical roles are to provide technical expertise and engineering support to create product features.		Architecture and design roles implement design patterns and experience features.
