

## NERVOUS SYSTEM

- **network of nerves** that connect the *spinal cord* and the *brain* to the rest of the body and allow a *stimulus-response* reaction to occur among different organs

**nerves** - begins at the brain and connect to different organs<sup>1</sup> - serves as a *control system* that dictates all voluntary and involuntary actions performed by the body<sup>2</sup>

### illustration of the nervous system

## NEURONS

- carry out the *main functions of the nervous system*

- *fundamental units* of the nervous system

- translate **external stimuli** into **electrical signals** transmitted into the *brain* where the *delivered information* is *interpreted*

### illustration of neurons

## NEURONS : 3 sections

1 : **cell body / soma** - the **main part of the neuron** where the *nucleus* is located<sup>1</sup> - translates *DNA information* that is transported to the *dendrites* and the *axon*<sup>2</sup>

2 : **axon** - *thick branch* that trails behind the soma<sup>1</sup> - surrounded by the **myelin sheath** [ a *protective covering* & lets *electrical impulses* travel more quickly along the unmyelinated axon<sup>2</sup>

**axon terminal** - at the end of the axon ; allows *communication* among *various neurons*

**action potential** - *electrical impulses* is transmitted through this process

3 : **dendrites** - *smaller branch-like extensions* attached to the ends of the soma<sup>1</sup> - process *electrical impulses* before transmitting them *to the axon* through *action potential*<sup>2</sup> - gather the *signals* picked up by *sensory neurons* in the body

**excitatory** - *fires up neurons*

**inhibitory** - *represses the neurons' tendency to fire up*

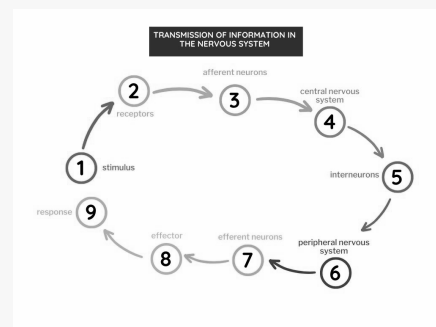

## NEURONS : 3 classifications

1 : **sensory neurons** - react to both *external & internal stimuli*<sup>1</sup> - *pick up information* from *outside* the body and *deliver* it to the *central nervous system*<sup>2</sup> - allows **sight, hearing, smell, taste & touch**<sup>3</sup>

2 : **interneurons** - *translate the information* between *sensory neurons* & *motor neurons* within the *spinal cord*

3 : **motor neurons** - *pick up information* from the *central nervous system* & *transmit* them through *nerves* in the rest of the body

## TRANSMISSION OF INFORMATION IN THE NERVOUS SYSTEM

## TRANSMISSION OF INFORMATION IN THE NERVOUS SYSTEM

- the *nervous system* recognizes a **stimulus** from *external & internal environment*

- **receptors** in *sense organs* pick up information from the *stimulus* and transmits them to *afferent neurons*

## TRANSMISSION OF INFORMATION IN THE NERVOUS SYSTEM

- the *nervous system* recognizes a **stimulus** from *external &*

## TRANSMISSION OF INFORMATION IN THE NERVOUS SYSTEM

- the *nervous system* recognizes a **stimulus** from *external &*
