

### Global Functions

`__(string $string_id[, $formatArgs])`

`__c(string $msg, integer $category, mixed $args = null)`

`__d(string $domain, string $msg, mixed $args = null)`

content note

### FormHelper

`FormHelper::create-`  
(string \$model = null,  
array \$options = array())

The first method you'll need to use in order to take advantage of the FormHelper is create().

### HtmlHelper

`HtmlHelper::charset($-`  
charset=null)

The most important task the HtmlHelper accomplishes is creating well formed markup.

`HtmlHelper::meta(string`  
\$type, string \$url = null,  
array \$options = array())

This method is handy for linking to external resources like RSS/Atom feeds and favicons.
