Cheatography

Chemistry - Chapter 7: Rates Of Chemical Reactions Cheat Sheet by Autumn (Autumn) via cheatography.com/145676/cs/31777/

Reaction Rate

Change in reactants/products' concentration over time

Factors That Increase Reaction Rate

- 🖒 Surface area
- Concentration
- Pressure
- C Temperature
- Catalysts

Increasing Above Factors Also Increases...

- Collision frequency
- C Successful collisions amount

Temperature Increase Also Increases...

Collision energy

By Autumn (Autumn)

cheatography.com/autumn/

Experiment Methods To Measure Reaction

🖒 Mass loss

Rate

- Gas volume made
- Colour change
- Concentration changes
- 🖒 pH change

Catalysts

- C Speeds up reaction & isn't used up
- Causes more particle collisions

Heterogenous Catalysts	Homogenous Catalysts
🖒 Has different	🖒 Has same state
state to reactants &	as reactants &
producs	products

Not published yet. Last updated 21st April, 2022. Page 1 of 1.

Transition State

- C Unstable state
- Reactants' bonds broken & products'
 bonds forming
- C Triggered by activation energy

Collision Theory

Particle collision affects chemical reaction rates

Collision Requirements Of Reactant Particles

- Collision with each other
- Collision with enough energy
- c Collision in the right direction
