

Format

Your CSS code is written in **rule sets** like below:

```
h1 {color:blue;}
```

In this example color is the **property** and blue is the **value**

Each line of CSS must end in a ;

Classes and Ids

When referencing a **class** use a period, when referencing an **id** use a pound sign. Example:

```
.class-name {}
```

```
#id-name {}
```

Spacing and Sizing

padding The space inside the element

margin The space outside the element

width Can be set by pixels (px) or percentages (%)

height Can be set by pixels (px) or percentages (%)

Text

color Change your text color (use a color name or hex code)

font-size Set the size of the text (make sure your number is followed by 'px')

text-align Moves the placement of your text, can be center, left or right

text-decoration Can be underline, overline, line-through or none

Background

background-color Set the background to any color name or hex code

background-image: url("link") Make the background an image, put your link in the quotes

background-size Change the size of your background image (set to "cover" to fill the screen)

Borders

border-style Can be dotted,dashed,solid,double,groove,ridge,inset, or outset

border-color Change the color of your border

border-width How thick the line of the border is, set with px
