

GETTING STARTED

<code>gcloud init</code>	Initialize, authorize, and configure the gcloud CLI
<code>gcloud version</code>	Display version and installed components
<code>gcloud components install</code>	Install specific components
<code>gcloud components update</code>	Update your gcloud CLI to the latest version
<code>gcloud config set project</code>	Set a default Google Cloud project to work on
<code>gcloud info</code>	Display current gcloud CLI environment details

Get going with the gcloud CLI

HELP

<code>gcloud help</code>	Search the gcloud CLI reference documents for specific terms
<code>gcloud feedback</code>	Provide feedback to the gcloud CLI team
<code>gcloud topic</code>	Supplementary help material for non-command topics like accessibility, filtering, and formatting.

gcloud CLI is happy to help

PERSONALIZATION

<code>gcloud config set</code>	Define a property (like compute/zone) for the current configuration
<code>gcloud config get</code>	Fetch the value of a gcloud CLI property
<code>gcloud config list</code>	Display all the properties for the current configuration
<code>gcloud config configurations create</code>	Create a new named configuration
<code>gcloud config configurations list</code>	Display a list of all available configurations
<code>gcloud config configurations activate</code>	Switch to an existing named configuration

Make the gcloud CLI your own; personalize your configuration with properties
