

## **Apptainer Cheat Sheet**

by Caughlin Bohn (cbohn4) via cheatography.com/203697/cs/43402/

Pulling images	
apptainer pull <output.sif> shub://[reposiory/name/]</output.sif>	Pull sif image from Singularity Hub
apptainer pull <output.sif> docker://[docker_image]</output.sif>	Pull Docker image from Dockerhub or remote container registry

apptainer pull <output.sif> docker-daemon://[image\_name] Pull docker image from local Docker image builds

Before a Docker image can be used by Apptainer, it must be pulled to make it compatible with Apptainer.

Apptainer Cache		
apptainer cache list	Show basic details on what is in the local cache	
apptainer cache list -v	Lists SIF images stored in the local cache	
apptainer cache clean	Remove everything stored in the local cache	
By default, Apptainer stores the cache in \$HOME/.ap pta ine r/cache, but can be changed by modifying the APPTAI NER _CA CHEDIR		

Executing commands from a image	
apptainer exec [SIF_File.sif] <command_to_execute></command_to_execute>	Execute a command from the image
apptainer run [SIF_File.sif]	Executes the default command for the image
apptainer inspect -r [SIF_File.sif]	Inspect the SIF image and locate the default command
apptainer shell [SIF_File.sif]	Open an interactive shell within the container

## Binding host directories to a container

apptainer shell -B /directory/to/add [SIF\_File.sif]

Add a directory to the same location in the container
apptainer shell -B /directory/to/add:/new/location/in\_container [SIF\_File.sif]

Add a directory to a different location in the container

The "-B" arguement can apply to the shell, exec, and run sub commands of Apptainer. shell is only used as an example. This is refered to as "Binding" the directory inside of the container.

## **Building Apptainer Images**

variable

apptainer build /path/to/ouput.sif /path/to/input.def Build a sif image using the .def definition file.

Apptainer Definition File Keywords		
Apptainer	Docker Equivalent	Description
From:	FROM	Base image for the image
%files	ADD	Add files from the host system into the image
%environment	ENV	Add environment variables to the image
%post	RUN	Run commands to build or install software in the image
%runscript	CMD / ENTRYPOINT	What to run when the container is used with apptainer run
%setup		Run commands on the host system before starting the build
%labels	LABEL	Add metadata labels
Bootstrap		Tells Apptainer which type of source the base image will be.

Examples and more information is available at https://apptainer.org/docs/user/main/definition\_files.html
