Sessions

Start a new session	**tmux**
Attach to default session	**tmux a**
List existing sessions	**tmux ls**
Detach current client	**^b d**
Detach other clients	**^b D**
Rename the current session	**^b $**

Note: **^b** is the default bind-key **ctrl+b**.

Windows (tabs)

Create a new window	**^b c**
Next window	**^b n**
Previous window	**^b p**
Select a window interactively	**^b w**
Rename the current window	**^b ,**
Kill the current window	**^b &**

In the status bar (bottom) are the number/name of windows.

Tmux prompt commands

Enter a tmux command prompt	**^b :**
Toggle broadcast to all panes	**setw synchronize-panes**

Panes (vertical/horizontal splits)

Split current pane vertically	**^b %**
Split current pane horizontally	**^b "**
Navigate around panes	**^b <arrow keys>**
Resize the current pane	**^b ^<arrow keys>**
Swap pane location	**^b ^o**
Send the current pane to a new window	**^b !**
Toggle zoom current pane	**^b z**
Arrange panes in a tiled layout	**^b alt+5**
Arrange to a next preset layout	**^b <space>**
Kill current pane	**^b x**

There are many other key-bindings for resizing panes that are worth learning, but out of scope for a basic cheatsheet.

Config file for customization

```
# Shortcut to 'synchronize panes' with '^b ='
bind = set -g synchr oni ze- panes
# Enable mouse support
set -g mouse on
```

Save this configuration in the `~/.tmu x.conf` file.
