Basics

Statements	A single line of code
Blocks	Lines of code grouped by semicolons
Variables	A named location in memory
Methods/functions	Callable block of code by name
Classes	Grouping of methods and member variables. Doesn't exist in memory until you "instantiate" them with `new`
Packages	Groups of classes (usually a folder)
Variable **Scope**	Where a variable can be used/seen
Anonymous method	A method declared on the fly, without a name

Common Classes (Types)

primitives	int, double, boolean
List	list of Objects indexed by number
Map	list of Objects indexed by a name (typically)
Robot	class with loop methods invoked by
RobotContainer	
<Name>Subsystem
