Terraform

terraform	Help page is called.
terraform init	Initializes various local settings and data used by subsequent commands.
terraform plan	See execution Plan before you apply it.
terraform show	Check current status.
terraform destroy	Resources can be destroyed using the terraform destroy command, which is similar to terraform apply, but behaves as if all resources have been removed from the configuration.
terraform refresh	Update the local status file based on actual resources.
terraform output	This data is output when apply is called and can be queried with the command terraform output.
#	Comment

Problems

terraform -v	test your version

OS

Develop in Linux

add terraform command to PATH forever

swtich to

~.profile

insert into and append:

```
if [ -d "$HOME/programms" ] ;
then PATH="Path of your file directory:$PATH"
fi
```
