

### General

docker images	list all images
docker ps	list live containers
docker ps -a	list live and non-live containers
docker push <image>:<tag>	push image to repo
docker pull <image>:<tag>	pull image from repo

### Container Commands

docker run <image>	run container from given image
-d	run in background
-p <host_p>:<container_p>	expose container port to host
-v <host_v>:<container_v>	mount host path to container
--name	give the container a name
--rm	remove container after exit
docker cp <container>:<path> <h_path>	copy from container to host
docker cp <h_path> <container>:<path>	copy from host to container
docker exec -ti <container> bash	execute terminal of a live container
docker exec <container> <command>	execute a command on a container

### docker volume

ls	list volumes
inspect <volume>	inspect a specific volume by id or name
rm <volume>	remove a specific volume by id or name

### docker-compose

up	run the stack
up <container_name>	run a specific service from stack
-d	run in the background
kill	kill all containers
kill <container_name>	kill specific container
ps	list running containers of the stack
rm	remove containers
rm -v	remove containers and their volumes
build	force (re)build of the stack's containers
