

## Geometry- Circles, Arcs, and Diameters Cheat Sheet by nina (Corinna-Lyons) via cheatography.com/147163/cs/31963/

equations	
Diameter	D = 2 × r
Circumference	$C = 2 \times \pi \times r$
Area	$A = \pi \times r2$

terms	
radius	the distance from the center of the circle to its outer rim
chord	a line segment whose endpoints are on a circle
diameter	a chord that passes through the center of the circle. the length of the diameter is two times the length of the radius
secant	a line that intersects a circle in two points
tangent	a line that intersects a circle in exactly one point
point of tangency	the point where the tangent touches the circle

good luck friend:)	you got this				
I believe in you!!!					

## graphing circles

(x-h)2+ h=the x axis, k= the y axis, (y-k)2=r2 and r=the radius example: (x-1)2+(y+3)2=4radius=2 center=(1,-3)

arcs- the basic	
major arcs	arcs above 180
minor arcs	arcs below 180
semicircle	arc equivalent to 180
