NewOldPOS List of Commands for Employees Keyboard Shortcuts

by danielasanchez30 via cheatography.com/212278/cs/46138/

Main Application

1	Go to sales
2	View Inventory
3	Exit App
F1	Help / Legend
F3	Go Back
F5	Search Receipt
F12	Complete Sales
E	Edit selected cart item
X	Remove selected cart item
P/D	Sale Type: Pickup / Delivery

Integrates all features into a unified interface. Initializes inventory, sales, and cart management functionalities.

Sales Module with Live Cart

SKU.QTY (e.g. 1011.5)	Add Item * Quantity: Add item with specified quantity
Select item	Focus Edit Quantity Bar
d	Delete Item Button: Remove item from cart
new quantity + Enter	Update Quantity: Update item quantity
ctrl + z	Undo Last Button: Undo last action
F12	Complete Sale Button: Checkout Cart
F4	Print Receipt Button: Generate Receipt Screen

Users can add items to a live cart via SKU numbers. This module supports the adding of multiple quantities via the SKU.QTY processing capabilities as seen below. Cart item quantities can be easily edited or removed. The cart always shows real-time status of cart items, quantities, subtotal(s), and total.

Inventory Module

← →	Previous/Next Buttons: Move between pages
↑ ↓	Cursor: Select Items
p + number + Enter	Page Button: Move to page number
a	Add to Cart Button: Quick-add Selected Item to Cart

Users can easily view the current/incoming inventory through the inventory module. This module supports rapid navigation with keybindings, filter searches whilst allowing users to use their cursor for an organic and dynamic experience. Users can filter search by name, ID, and category. The module also supports a quick-add function where they can add items to their live cart directly from the inventory module.

Receipt Module

v	Download and view PDF
c	Close Module

Allows users to view or download a receipt in PDF format and retrieve past sales transactions using a unique Sale ID.
