:PackerUpdate	Clean, then update and install plugins

### LSP Typescript Utils

leader + gi	Rename TypeScript file and update imports
leader + go	Import all missing imports in TS Files
leader + gs	Organize imports in TypeScript Files

### Trouble

leader + xd	switch to document diagnostics from the builtin LSP client
leader + xr	refresh the active list
leader + xw	switch to workspace diagnostics from the builtin LSP client
leader + xx	toggle Trouble window

### Git

:Git	run git command in terminal, Eg: :Git checkout -b test
leader + gR	Revert the current file to the specific commit
leader + gb	Open blame window
leader + gd	Opens a new diff that compares against the current index
leader + gn	Create a pull request with the target branch is set in the target_branch option
leader + go	Open file/folder in git repository
leader + gp	Open pull request of the current branch
leader + gr	Revert to the specific commit

### Git conflict

:GitConflictListQf	Show all conflicted files in quickfix window
c0 or :GitConflictChooseNone	Select both none of the changes
cb or :GitConflictChooseBoth	Select both changes
co or :GitConflictChooseOurs	Select the current changes
ct or :GitConflictChooseTheirs	Select the incoming changes

### Spectre

leader + s	open search panel
leader + sp	search in current file
leader + sw	search for selected word

When the search panel is opened we can use the following shortcuts:

enter	goto current file
dd	toggle current item
leader + R	replace all
leader + c	input replace vim command
leader + o	show option
leader + q	send all item to quickfix
leader + rc	replace current line
leader + v	change result view mode
th	toggle search hidden
ti	toggle ignore case
tu	update change when vim write file

### Sorting

leader + so      sort visual selection

### Search

space      search

control + space      backward search

leader + space      remove search highlights

### Split Management

control + h      Move to existing or create a new split to the left of your current window + open file or custom command

control + j      Move to existing or create a new split to the top of your current window + open file or custom command

control + k      Move to existing or create a new split to the bottom of your current window + open file or custom command

control + l      Move to existing or create a new split to the right of your current window + open file or custom command

### Session Management

:SessionDelete      Delete the current session

:SessionLoad      Load the session for the current directory and current branch if `git_use_branch = true`

:SessionLoadLast      Load the last session

:SessionSave      Save the current session

:SessionStart      Start recording a session. Useful if `autosave = false`

:SessionStop      Stop recording a session

:SessionToggle      Determines whether to load, start or stop a session

leader + sm      open saved session list

### LSP Installer Commands

:LspInstall [--sync] [server]      installs/reinstalls language servers. Runs in a blocking fashion if the `--sync` argument is passed (only recommended for scripting purposes).

:LspInstallInfo      opens a graphical overview of your language servers

### LSP Installer Commands (cont)

:LspInstallLog      opens the log file in a new tab window

:LspPrintInstalled      prints all installed language servers

:LspUninstall [--sync]      uninstalls language servers. Runs in a blocking fashion if the `--sync` argument is passed (only recommended for scripting purposes).

:LspUninstallAll [--no-confirm]      uninstalls all language servers

### LSP Commands/Shortcuts

K      Displays hover information about the symbol under the cursor in a floating window.

[ + d      Move to the previous diagnostic in the current buffer.

] + d      Move to the next diagnostic.

control + k      Displays signature information about the symbol under the cursor in a floating window
