Install curl and RVM		IRC #rvm @ freenode - http nels=#rvm
If it is not installed already, install curl. To check if it is installed, run the command which curl. If there is not output, run the following command: apt-get install curl curl -L get.rvm.io bash -s stable close and reopen your terminal window after running this command. To make sure it installed and is available, type which rvm or rvmverion; but only after reopening your terminal window. See https://rvm.io/rvm/install and http://rvm.io/rvm/installation/ Install Ruby rvm install 1.9.3		So you got through it all Error Poosi
<pre>rvm install 1.9.3 -j # rvm install 1.9.3patch falco.</pre>		I VIII SYSCEIII
rvm install 1.9.2-p318	Patch level 318	rvm use jruby
rvm install rbx1.9	Rubinius with 1.9 mode set as default	rvm usedefault
IVIII IIIStall IDX1.9	hubinius with 1.5 mode set as deladit	1.9.3
Update RVM		rvm useruby-ve-
rvm get stable		rsion rbx
In case of problems try first with development version (maybe it's already fixed):		RVM will automatically use to a project directory.

Gemsets

RVM by default allows creating multiple environments for one ruby - called *gemsets*.

Gemsets can be specified together with ruby name using gemsets separator(@):

- ruby-1.9.3-p125@my-project

During installation of Ruby, RVM creates two gemsets:

- default - automatically selected when no @gemset specified: rvm use 1.9.3

- global - super gemset, inherited by all other gemsets for the given ruby

Working with gemsets			
rvm use 1.8.7	use the ruby to manage gemsets for		
rvm gemset create project_name	create a gemset		
rvm gemset use project_name	use a gemset in this ruby		
rvm gemset list	list gemsets in this ruby		
rvm gemset delete project_name	delete a gemset		
<pre>rvm 1.9.1@other_project_name</pre>	use another ruby and gemset		
rvm 1.9.3@_projectcreatervmrc	use and create gemset & .rvmrc
