

Total Commander Button Bar Parameters		Total Commander Button Bar Parameters (continued)	
?	As the first parameter causes a Dialog box to be displayed before starting the program, containing the following parameters. You can change the parameters before starting the program. You can even prevent the program's execution.	%F	Long file names without path, e.g. Long name
%P	Causes the source path to be inserted into the command line, including a backslash (\) at the end.	%f	Short file names without path, e.g. LONGNAME
%N	Places the filename under the cursor into the command line.	%D	Short file names including the complete path set for accents.
%T	Inserts the current target path. Especially useful for packers.	%d	Short file names without path, but using the accents.
%M	Places the current filename in the target directory into the command line.	These are pretty helpful and took me a while to find them, even if it is one day in the future.	
%O	Places the current filename without extension into the command line.	How-to use Total Commander button bar parameters	
%E	Places the current extension (without leading period) into the command line. <i>Note: %N and %M insert the long name, while %n and %m insert the DOS alias name (8.3). %P and %T insert the long path name, and %p and %t the short path name. (Same for %o and %e)</i>	Step 1. Create a new button on the button bar	
%%	Inserts the percent sign.	Step 2. Using the menu, insert the path to the ImgBurn icon	
%L	Long file names including the complete path, e.g. c:\Program Files\Long name.exe	Step 3. Insert the string below as the value in the Parameter field	
%l (lowercase L)	Short file names including the complete path, e.g. C:\PROGRA~1\LONGNAME~1.EXE	This will feed a file to the standard build menu ? ?/MODE BUILD /BUILDINPUTMODE STANDALONE DEVICE /SRCLIST "%P%" /FILESYSTEM "UI" /NOIMAGEDetails /ROOTFOLDER YES /NOVOLUMELABEL "%O"	
		You can use the cheats above to figure out what icon to use	
		Step 4. Choose the icon for the button and press ok.
