

Introduction

Many of the functions required within the LTPAC EHR system align well with the standards established in the HL7 EHR-S and the CCHIT certification process. While the high-level list below should cover most of the LTPAC care settings, there will be variability in function specifics, process, protocol and workflow.

Community Integration

- eDischarge integration (up + downstream)
- Pre-admission
- Intake assessment, triage, placement
- Admission, quick-admit
- Directives, consents, authorizations
- Discharge evaluation, readiness, transition

Care Delivery

- Patient profile, snapshot, dashboard
- Patient verification (including 5Rs)
- History, vitals, ht-wt, allergies, immunizations
- Assessments + evaluations, MDS
- Care plans, guidelines and protocols
- ADL
- Progress notes and reports
- Physician H&P, NP, CPOE, authorization
- Decision support
- Food & nutrition, dietary
- Medication administration, Rx-integration
- Therapy (PT, OT, ST, RT)
- Activities
- Radiology, order, results-integration
- Lab, order, results-integration
- Biomedical device data capture
- Paper & non-native document capture
- Patient-centered scheduling

Analytics

- Quality measurement & outcomes
- Customer reporting & analytics
- Capitation and risk management

Financial

- Census
- Episodes, services, encounters, coding
- Eligibility, authorization, re-authorization
- Ancillary charge import
- Billing, statements
- AR, denials management, collections
- Cash receipt, posting
- Transaction clearinghouse integration

Communication

- Care Team communication, secured texting
- Tele-practice
- Collaboration

Customer

- Patient and responsible party communication
- Medical record access, distribution
- EHR on-line access
- Patient progress reporting

Management

- Alerts; operational + clinical
- Event management
- Workflow
- Remote monitoring by internal audit
- CMS audit access

System Foundation

- Single integrated EMR repository
- Security, privacy, audit
- User identity management, single sign-on
- Libraries, classifications, directories
- HIE, hospital and provider exchange
- Web-Internet accessible, mobility
- Backup, recovery, operations management
- Back-office integration; HR, GL
