Use email to Send SMS-Text Messages Cheat Sheet

by [deleted] via cheatography.com/2754/cs/4563/

How to Send Text to a Cell Phone Using eMail

To send an SMS message to a cell phone, you will need to know the Service Provider for the Cell phone. Then create an email message (not too long, SMS messages are limited to 160 characters) and send an email message to the user phone number followed by the service providers Internet address.

Example: Too send an SMS message to a Verizon Cell/Smart phone user, the email message would be address to user's phone number 9141231234@vtext.com.

The SMS message is a one-way message only. The Cell/Smart phone user will not be able to send back a reply. For 2-way SMS messaging between PC and the Phone you will need to subscribe to a commercial SMS Gateway service.
