

1. Nearby

Nearby Notifications help businesses reach their customers with relevant messaging when they are in proximity to them or their physical location, with no prior app install required. This is ideal for storefronts, service providers, real estate agents, and events.

2. Wayfinding

Guide people through a physical environment and enhance their experience in the space. Our beacons can help users understand exactly where they are standing, and how to get to their desired destinations. This is ideal for conferences, airports, stadiums, museums, malls, hospitals, universities, and warehouse retail stores.

3. Customer Location Solution

Whether you are a restaurant, hotel, casino, or other hospitality service where your customers demand fast and convenient service within your venue, we have a solution for you. Our Customer Location Solution leverages beacon-enabled smart locators, customers' mobile devices, and/or a network of BLE detectors to identify the location of a customer for order delivery and messaging.

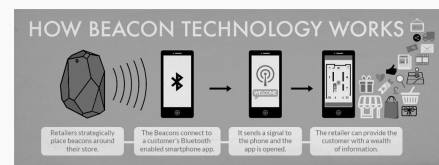

4. Curbside Pick-up and Drive-thru

Radius Networks can set up a geofence to signal when your customers are within a certain radius, ensuring their order is ready upon their arrival.

5. Smart Digital Signage

Display Kit™ is a cloud-based platform that combines digital signage with proximity technology and content management to create omni-channel engagement. Display Kit™ can trigger mobile devices within a specific distance of the display.
