<div class="introduction">
<h1 id="introduction">Web
application</h1>
<p>A web application is an
application that is accessed by
users over a network such as the
Internet or an intranet.
The term may also mean a
computer software application
that is coded in a browser-sup-
ported programming language
and reliant on a common web
browser to render the applic-
ation executable.</p>
</div>
<div class="section">
<h2 id="history">History</h2>
```

HTML 12-4 (cont)

```
<p>In earlier computing models,
e.g. in client-server, the load
for the application was shared
between code on the
server and code installed on
each client locally. In other
words, an application had its
own client program
which served as its user
interface and had to be
separately installed on each
user's personal computer.</p>
<p>In contrast, web applications
use web documents written in a
standard format such as HTML and
JavaScript,
which are supported by a variety
of web browsers. Web applic-
ations can be considered as a
specific variant
of client-server software where
the client software is
downloaded to the client machine
when visiting the
relevant web page, using
standard procedures such as
HTTP. During the session, the
web browser interprets and
displays the pages, and acts as
the universal client for any web
application.</p>
</div>
<div class="section">
<h2 id="interface">Interface</-
h2>
<p>Through Java, JavaScript and
other technologies, applicati-
on-specific methods such as
drawing on the screen, playing
audio, and access to the
keyboard and mouse are all
possible. Many services have
```
