

Data collection and design sampling

Research is an indispensable part of the thesis writing exercise. Hence, the research methodology format needs the serious attention from students who are trying to write a dissertation or any thesis document. Therefore, it is essential that students formulate what are the different types of essays and a strategy to prepare a process of conducting research on their chosen topic and then executing that process with precision. While the structure of a thesis paper will have a cover page, abstract, introduction and the essay body with conclusion, the research methodology must be described in a separate chapter, within the essay body, that would detail the necessary requirements of conducting the research exercise effectively, starting from the presentation of a research proposal. Given below are a few guidelines that explain the requirements of various sections under this chapter. However, students are also advised to look at other papers like online essays or cause and effect essay for getting a better grip on the skills of writing an excellent dissertation paper. In any case, these skills will also be useful for preparation of a good research methodology format.

Set your research goals

This will relate to the topic and the thesis statement, chosen by the student. The requirement of information, its form and quantum should be decided accordingly. Thereafter, the sources that are needed to get the required information should be listed, to save precious time in unnecessary and aimless surfing. As the research process would also include getting the results from a selected sample of respondents, it is essential that students prepare a section within this chapter that would deal with the sampling and its design. This will involve the grouping into categories of probability or non-probability design sampling.

Data collection

Students must devote a considerable part of the research methodology format towards the methods chosen to collect the required information. Hence, various methods of collecting the data like direct monitoring through interviews and surveys, or observation of certain experiments, should be detailed in this section. While these can be quantitative or qualitative, surveys and interviews must be done to collect the facts that relate to the hypothesis of the essay. In case of collecting information through personal or postal interviews, the design of questionnaires and the method of sample selection should be discussed in this section in detail.

Data analysis

Once the data is collected, same would need to be analyzed by the students. This can be done by utilizing various tools like ANOVA, analysis of variance, descriptive statistics etc.. Although there are many methods of data interpretation and analysis, students must choose a method that can best relate to their selected topic. The presentation of the results and discussion chapter of the thesis paper will greatly depend on this section. While the whole paper will need essay format to maintain a certain writing style, the research methodology format should also be written in the same style, be it MLA, APA, or any other writing format.
