### savant Cheat Sheet by echoecho via cheatography.com/198358/cs/44029/

#### platt

platt created an internal fund and move all of his star traders from the firm fund into the internal fund, and the investor fund chronically unperformed because it was managed by an algo. copying the trades of the internal fund with a one day delay for a period of 4 years.

#### icahn

the earnings U.S. corporations have been reporting in recent years are a mirage and earnings guidance often doesn't account for stock compensation, neglects to amortise intangible assets, and ignores restructuring and takeover costs.

big buybacks at companies like apple for years, said in an interview that share repurchases are not appropriate for all companies and should not be as ubiquitous as they are these days.

a lot of midget CEOs/companies that are going 30/40x earnings via buying back stock. They buy back these stocks at very low interest rates in order to financially engineer and inflate earnings.

# many companies don't amortise intangible assets (overstated earnings)

companies are not depreciating accurately. they disregard GAAP earnings. They go and acquire companies that has a product (the compound) however its going off patent relatively soon. they disregard amortising this as they believe they are so good and proceed onto purchasing even more companies. alot of these companies are not R&D so they're at expense to it.

investment made into a pool -> high-tax income -> low-tax

**napoleon**: battle of friesland before he lost it all due to hubris.

doesn't stay forever if you're not careful.

#### lynch (cont)

something that either can solve a problem that hasn't been solved before, something where it can be done at literally a tenth of the cost - you want to see an order of magnitude difference.

#### intuition over convoluted spreads

for a hard-headed academic his view of intuition made sense in terms of data processing and how we predict things happening. He was adamant that "hunches, gut feeling, intuition" were all sophisticated measures by which decisions are taken, "not boring spreadsheets. This is why big companies make such bad decisions. The danger of analysis drives me nuts but I've had to learn this."

#### missed opportunity

a "posh dreamer" came to him with a great idea to download music over the internet. Lynch said he spent a long time explaining to him why his vision wouldn't work. That it would take four days to download a single over the internet and the disc to store it on would cost the same as the average house.

reflecting on his response, he said: "of course, what I should have done is said all of that and then gone away and plotted the cost of disc drives and realised he could be on to something. however, the over-analysis stopped it happening and I missed out."

#### lynch

#### accounts:

 putting hardware sales as software sales.
 ochestrate transactions with value-Added Reseller (VAR) to prematurely recognise revenue. (hitting targets by using 3P/VAR to make it look like the sales were earlier than they were).

| distrust of<br>the<br>whisperer: | the longer he operated in wall<br>street the more distrustful he<br>became of tips and "inside"<br>information of every kind.  |

#### thorp (cont)

most stock-picking stories, advice, and recommendations are worthless, and it's difficult to identify and predict asset bubbles. the book "Superforecasting" by Dan Gardner and Philip Tetlock reveals that experts often don't provide valuable insights and tend to make inaccurate claims, they receive a lot of media attention because they make definitive claims. people who consider various possibilities can make slightly better predictions than chance. inside information can be dangerous, as it often leads individuals to ignore obvious economic facts and act overconfidently. "given time, I believe that inside information can break the Bank of England or the United States Treasury. a man with no special pipeline of information will study the economic facts of a situation and will act coldly on that basis. give the same man inside information and he feels himself so much smarter than other people that he will disregard the most evident facts."

most market professionals think card games are too risky, they do not understand its safer than stocks when done right.\*

the first mover in chess is someone who plays white. white has about a one-third of a pawn advantage, so there's a small advantage to going first. **you want to be the last mover—the one who wins the game**.

as the world chess champion capablanca once said, **"you must begin by studying the endgame."** while I wouldn't say that's the only thing you should study, I think this perspective of asking these questions why will this still be the leading company 10, 15, or 20 years from now—is a really critical one to consider.

bitsworld of bits allows fasterallowadoption in comparison to thespeed:world of atoms.

#### thiel (cont)

| don't be<br>decieved<br>by TAM:   | what is the objective total<br>market (TAM) as a narrative<br>can be conjured that is fictional<br>and much bigger or smaller.<br>always remember that people<br>have incentives to powerfully<br>distort such figures made<br>public.                     |
|-----------------------------------|--|
| avoid fad<br>method-<br>ologies:  | skeptical of lean startup<br>methodologies. great<br>companies did things that were<br>a quantum improvement/leap<br>that really differentiated them<br>from everybody else. No<br>massive customer surveys, not<br>deterred by what others tell to<br>do. |
| move<br>fast,<br>break<br>things: | there's not enough time to<br>mitigate risk. If you take enough<br>time to figure out what people<br>want, you often would have<br>missed the boat by then.  |

#### thiel (cont)

| mba v.    | studies have been done that     |
|-----------|---------------------------------|
| founders: | usually the people who go to    |
|           | business school is sort of the  |
|           | anti-Asperger's institution.    |
|           | where you have people who       |
|           | are extremely extroverted,      |
|           | generally have low conviction   |
|           | and few few novel ideas. put    |
|           | these people in this place for  |
|           | two years and at the end of it  |
|           | they end up being the largest   |
|           | cohort that systematically tend |
|           | to do the wrong thing.          |
|           |                                 |

#### thiel (2)

#### get started

just get started, your idea is going to evolve. most companies started out as a product, many of which were side projects.

#### zero to one

you should not start a business for the sake of starting a business. "you don't start a company for its own sake, but because there is a large, specific problem that can not be solved in the existing structure when they become too sclerotic, political and stagnant."

#### thiel (2) (cont)

you should start a business because there is a problem that nobody else is solving. that is what entrepreneurs are, at their best. when I hear about a company that makes a lot of sense that is really fresh and strange, that is often a really promising kind of idea. whereas, when it is the fourth online pet food company or the tenth thin film solar panel company...that is often not as good of an investment.

#### take risk

in a word changing so quickly, the biggest risk you can take is not taking any risk.

a good board challenges a ceo/founder to think differently. aid them in thinking multidimensionally.

successful people find value in unexpected places. If you are looking where everyone else is looking you will be surrounded with competition and it'll be quite difficult to differentiate.

"from the outside everyone wants to get in, but everyone on the inside wants to get out"

#### team

salary of the founder should be less than 150,000, even post Series A\*

#### thiel (2) (cont)

hire full-time, no consultants, no part time, no working from home, eco should pay himself/herself less than everyone else.

working with people you're close to is underrated.

don't have team members instantly join the team. that will avoid bad hiring to fix short term problems from the team (even up to 3 months)

compassion is offering severance packages (a minimum of 4 months). the legal release you get in exchange for the severance package helps avoid employee lawsuits.

conflicts arise when people want the same thing.

the mission of the company should be sharp differentiated from the rest of the world.

differentiate roles sharply within the company.

NOI (net operating income) of the build.

only 1% growth - with great government stimuli, 0% interest rate, globalisation and tech development. (unfortunately, no one can effectively short the education system.)

#### equity

be extremely generous with employees, and a lot less generous with investors.

marks (2)

hayes

#### soros

exploit fallibility and reflexivity

By echoecho cheatography.com/echoecho/

#### soros (cont)

all humans are fallible, so all investors are not perfect. In situations where you have thinking participants the participants view of the worlds never perfectly correspond to the actual state of affairs. people can gain knowledge of initial facts and truths but when it comes to forming an overall view their perspective is bound to be biased, inconsistent or both.

these fallible views impact the situation to which they relate. Investors imperfect view impacts the market, which in turn reflects its impact back to the investors which again the investors reflects its impact back onto the market.

#### new markets

huge amounts of money piled in, fuelled with leverage, financing and the greed of fallible humans.

#### bet large when opportunities come

profit big when right, lose small when wrong (high reward, low risk bets)

make money when controlled markets revert to free markets, used 1B\$ to borrow Thai BAHT and converts the BAHT into USD. waited for the Thai BAHT to get weaker so he can pay back the debt at a lower rate (essentially a huge short against the BAHT that needs to devalue)

don't look for rules, look for rule changes

#### soros (cont)

spot where other investors are making mistakes. where are people applying conventional investing rules to markets where the rules have changed.

be fluid, ready to adapt to change. look for signs that a trend has been exhausted. then disengage from the herd and then look for a different investment thesis.

if the trend has been carried to excess, you have the option to probe against it.

*"If investing is entertaining, if you're having fun, you're probably not making any money. good investing is boring."* 

"it's not how right to wrong you are that matters but how much money you make when right and how much you do not lose when wrong."

#### ackman

- the key is owning business that have pricing power.

- many businesses can do well with 3% inflation, it is hard to manage a business in a world were inflation is volatile.

- own royalty orientated business (universal
- royalty on music, hilton - royalty on people staying in hotels or going to events etc.)

- value of a business is the present value of the cash you can take out of it over its life discounted back at an appropriate interest rate (most discount using 2%, use 8-15%) as this will discount the uncertainty inherent of investing in equities

- if something changes that makes the predictability of the business extremely difficult from when your initial investment was made, i.e. a big change in business strategy/model, exit.

### savant Cheat Sheet by echoecho via cheatography.com/198358/cs/44029/

#### ackman (cont)

- shoudn't keep a few hundred million dollars sitting in a bank forever. Other than cash one needs for daily needs this number should be kept pretty small, everything else should go into a U.S. treasury money market account or to ownage of U.S. treasury bills directly. Through this, one is not taking bank risk and only facing the U.S. Sovereign.

Cheatography

 the minimal cash that is kept on hand can be parked at J.P. Morgan or a prime broker like Goldman Sachs or UBS and monitor these institutions very carefully.

- in past history there's been a recession every 7-8 years. Assuming tomorrow follows the very same pattern. This is already factored in to the value of the enterprise. The only reason why a recession destroys value is usually due to the fact that a company is highly leveraged.
If revenue declines and cash flow goes negative. The company can't support their debt and they go bankrupt, however if it is a well capitalised business a recession shouldn't have a meaningful impact on such company beyond the short term.

- complexity, by its nature, provides more opportunities to be fraudulent. Even more for financial institutions.

#### the ackman

place short position -> cause panic -> sell the short position -> purchase beat down stock assets -> repeat the process

| ackman (pershing principles) |                                    |
|------------------------------|------------------------------------|
| simple:                      | simple and predictable businesses. |
| cf:                          | free cash flow generative.         |
| market<br>share:             | dominant market position.          |
| hard to do:                  | large barriers to entry.           |
| hard<br>return:              | high return on capital.            |

#### ackman (pershing principles) (cont)

| minimal<br>expo. to<br>risk: | limited exposure to non-contr-<br>ollable extrinsic risks.   |
|------------------------------|--|
| strong<br>b/s:               | strong balance sheet where outside capital is not necessary. |
| good<br>manage-<br>ment:     | excellent management and good governance.                    |
| ment.                        |  |

with traditional funds, - People take their money out every quarter.\*

to bypass this utilise permanent capital, if clients want to sell stock they can, but the money stays.\*\*

#### dredge

#### on convexity

modern portfolio theory "optimise based on a risk appetite, maximising expected returns".

| кепу      | formula used to determine the       |
|-----------|-------------------------------------|
| criterion | optimal size of a series of bets to |
| rule:     | maximize long-term wealth,          |
|           | balancing potential profits and     |
|           | the risk of ruin.                   |
|           |                                     |

agnostic buyer of volatility.

cheap volatility is inherently implicit leverage.

the world isn't about unanticipated exogenous events. The worlds is about built up accumulated endogenous risk in the system (In physics this is known as self-organised criticality).

long volatility, long convexity (defensive side/ tail-risk strategy)

guy with the best brakes wins

#### dredge (cont)

| denominator is the | the denominator is |
|--------------------|--------------------|
| most important     | more important     |
| factor in compou-  | than the numerator |
| nding:             |                    |

"prevention is better than cure"

middle players on football pitch, result is determined within 2% on either end

rarely do you earn asymmetric returns betting on the expected outcome

the longer time passes without anything happening the more risk there is

the endogenous risk is due to the lack of capital behind supporting of the buildup of this risk taking

very leveraged, 0% RWA, slightest change in the assured correlation in those mortgages wiped out all the capital in the whole banking system

who's going to take the 40?

government bonds treated as riskless-risk reducing (levered gilts, LDI, pension schemes)

ask is Sharpe world closing? Is money leaving?

there is no transitory part in the debasement of a currency

#### cohen (cont)

- plan before, not during a crisis

Cheatography

 the stock price changed for a reason (there's always a reason and the real question is whether it's worthwhile to find out, as this takes precious time)

 policy makers play by their own rules (rookies say "they can't do that")

 valuations don't matter (math is not an investment edge). the most important thing is why its cheap or expensive and "how" that changes

- misunderstanding time frames (only look at charts where the time period shown matches your holding period. If you plan to hold US equities for 20 years, look at a 20year chart).

| avoid      | this means having a comfor-      |
|------------|----------------------------------|
| being too  | table share of your portfolio in |
| illiquid:  | assets you can sell quickly for  |
|            | a fair price. Some illiquid      |
|            | assets might include real        |
|            | estate and fine art. Having a    |
|            | high level of liquidity allows   |
|            | investors to swiftly move their  |
|            | money when and to where          |
|            | they see fit.                    |
| don't be   | using leverage means             |
| over-      | investing with borrowed          |
| leveraged: | money. The upside can be         |
|            | substantial when using           |
|            | leverage, but this also means    |
|            | that the downside can be         |

#### cohen (cont)

| conen (cont)              |  |
|---------------------------|--|
| focus on<br>your losers:  | if you feel like something is<br>changing or feel like you<br>don't know why, reduce<br>positions.   |
| extra time<br>to analyse: | use the weekend to analyse<br>why its happening and be<br>thoughtful about it as<br>oppose to attributing it to "I'm<br>not working hard enough, I'll<br>just work an extra two<br>hours." |
| remain<br>calm:           | lean into crisis' with<br>equanimity instead of being<br>reactionary   |
| managing<br>drawdowns:    | if you have drawdowns at<br>the start of the year it's the<br>toughest as you don't have<br>any profits to off-set them.   |
|                           |  |

#### trades

a stock's move is 40% down to the market, 30% to the sector and only 30% down to the stock. Conceptually the idea makes sense.

the **best trader makes money 63% of the time**. Most are 50% to 55%. So you must ensure your losses are as small as they can be and that your winners are bigger.

move with your feet if you think you're wrong. if you think you're wrong on a position - half it...

know who you are as a trader.

#### cohen (cont)

you can't control the market, but you can control your reaction. We can't control whether the market is going to crash or rally but we can control our response to the market.

if you have drawdowns at the start of the year its the toughest as you don't have any profits to off-set them.\*

#### buffett

stable/general take 20-50% (compostocks like sector unded ~20% a year) funds

leverage trades, 2x-4x

good basket of equities, strong cash, flow returns(use to pay down debt should you have to sit on it a while)

acquisition of insurance companies (bypass LP/GP partnership and perfect the concept of capital allocation)

"I'd rather buy a great business at a reasonable price than a reasonable business at a great price."
