

### Naming Conventions

Use the correspondent initial letter:

- X for the vertical add-on
- Y for specific e-THEMIS development
- Z for customer development

Be explicit in the use of names. Example:  
for a site field, use YFCY or YSITE, not  
YS1.

### Global variables

As standard, global variables start with G.

In specific coding, so as not to overwrite  
existing variables, use the following: GY +  
explicit variable name (example  
GYSTOFCY).

At the end of processing, remember to  
destroy the global variable using the **Kill**  
instruction, if it is no longer used outside of  
the context.
