

### Big Words

<b>Syntax Parser</b>	A programm that reads your code and determine what it does and if its grammar is valid.
<b>Lexical Environment</b>	Where Something sits physically in the code you write and what it surrounds

### Single Threaded

<b>One command at a time</b>	Under the hood of the browser, maybe not
------------------------------	--

### Synchronous

<b>One at a time</b>	And in Order
----------------------	--------------

One line of code executed at a time, in the order it appears.

### The Global Environment and Global Object

<b>Execution Context</b>	A wrapper to help manage the code that is running.- There are lots of lexical environments. Which one is currently running is managed via execution contexts. It can contain things beyond what you've written in your code.
<b>Object</b>	A collection of name value pairs

### The Global Environment and Global Object (cont)

<b>Execution Context(Global)</b>	Creates a Global Object and 'this'. In the browser both refer to the 'window' object. Global Object = this = window
<b>Global</b>	Not inside a function
<b>EC - Creation Phase</b>	Global Object, 'this', Outer Environment & HOISTING -> Setup memory space for variables and functions
<b>Variables</b>	Are all initially set to undefined
