QUERYING DATA

`SELECT c1, c2 FROM t;`

Query data in columns c1, c2 from the table t

`SELECT * FROM t;`

Query data from all columns from the table t

SORTING DATA

`SELECT c1, c2 FROM t ORDER BY c1 [ASC | DESC];`

📑Sorts the result by data in column c1 in ascending or descending order

*❶ Keywords **ASC** and **DESC** are optional - ASC will be used by default if order is not specified*

FILTERING DATA

SELECT DISTINCT c1 **FROM** t;

***DISTINCT** is used to select only unique values*

*❶ if more then one column are listed after **DISTINCT** keyword then the combination of these columns will be used in duplicates evaluation*
