

Common Javascript Object Syntax

Obj: Literal Notation
`var x = { property1:"somevalue", property2:"somevalue" };`

Obj: Constructor Notation
`var x = new Object(); x.property1 = "somevalue"; x.property2 = "somevalue";`

Obj: Dot notation
`obj.myProp` (gets value of myProp)

Obj: Bracket notation
`obj["myProp"]` (gets value of property in the string)

Method: Literal notation
`method: function(param){...}`

Method: Dot notation
`obj.method = function(param){...};`

New Obj Class
`function Name(param){...}`

List Obj Properties
`for (var propertyName in obj) { ... }`

Copying an Object

```
function clone() {  
  var objectCopy = {};  
  for (var x in card1){  
    objectCopy[x] = card1[x];  
  }  
  return objectCopy;  
}
```
