

pybricks cheatsheet By FLL TechTacos SugarLand Cheat Sheet by FLL Tech Tacos (flltech2019) via cheatography.com/94480/cs/20710/

Package	
pybricks	pybricks is a python package
	which contains all the modules to
	interact with EV3 Brick and
	associated hardware

Module	
ev3brick	ev3brick is a module which contains mehods and class methods to deal with EV3 brick
ev3devices	ev3devices is a module that deals with <i>Motor</i> and <i>Sensor</i> classes
parameters	Special kind of Module which deals with constants (Ex: color BLUE, Post.A etc). Also some static sound file names etc.,
tools	Used for dealing with Timing and Datalogging. Provides ability print output to terminal, wait and stop watch etc.,
robotics	Provides drivebase functionality. This is the module that makes your EV3 Move in different dicrection.

ev3Brick	
buttons()	Method that get a List of buttons pressed
light (Color)	Method that sets a back color on the brick. Refer to parameters module for Color constants

ev3Brick (cont)	
sound.beep(frequency,duration,volume)	classmethod using sound class. Play a beep/tone
sound.beeps (number)	classmethod using sound class. Play a number of default beeps with a brief pause in between.
<pre>sound.file (file_name,volume)</pre>	classmethod using sound class. Play a sound file.
display.clear()	classmethod of display on the brick. Clear everything on the display.
display.text(t- ext,cordinate)	classmethod of display. Takes inputs and displays on the brick LCD panel
battery .voltage	classmethod of battery. Get the voltage of the battery
battery.current	classmethod of battery. Get the current supplied by the brick

Class that provides dealing with each Motor
Deals with Touch
Reads Color
Gets the distance using infrared light
Gets the distance using sound waves
Used for measuring the robot's rotational motion. Helps in creating balncing

Motor Methods	
angle()	Get the rotation angle of the motor.
reset_angle (angle)	Reset the angle of the motor
speed()	Get the speed (angular velocity) of the motor.
stop (stop_type=Stop.COAST)	Stop the motor. Refer to <i>Stop</i> in parameters to see available stop types
run(speed)	Keep the motor running at a constant speed (angular velocity).

Cheatography

pybricks cheatsheet By FLL TechTacos SugarLand Cheat Sheet by FLL Tech Tacos (flltech2019) via cheatography.com/94480/cs/20710/

Motor Methods (cont)		Motor Methods		ColorSens	or
run_time (speed, time, stop_type=St- op.COAST, wait=True)	Run the motor at a constant speed (angular velocity) for a given amount of time	set_dc_settings (duty_limit, duty_offset)	adjust the behavior of the dc() command. This also affects all of the run commands, which use the dc() method in the background. t_run_settings configure the maximum speed and accelerat-	color() ambient() reflec-	Measures the color of surface Measures the ambient light intensity Measure the reflection of a
run_angle (speed, rotation_angle, stop_type=St-	Run the motor at a constant speed (angular velocity) by a given angle.	set_run_settings		tion() rgb()	surface using a red light. Measure the reflection of a surface using a red, green, and then a blue light.
op.COAST, wait=True)	angle.	acceleration)		InfraredSe	nsor
run_target (speed, target-	run_target (speed, targetangle, stop_t- ype=Stop.C- OAST, wait=True) track_target (target_angle) track_target (target_angle) track_target (target_angle) Track a target angle that varies in time. This method is useful in fast loops where the motor target changes continuously. stalled() Check whether the motor is currently stalled. run_until_stalled Run the motor at a			distance()	Measure the relative distance between the sensor and an object using infrared light.
ype=Stop.C- OAST,				beacon (channel)	Measure the relative distance and angle between the remote and the infrared sensor.
_ 0				buttons (channel)	Check which buttons on the infrared remote are pressed.
		set_pid_settings (kp, ki, kd, tight_loop_limit, angle_tol- erance, speed tolerance, stall speed,	Configure the settings of the position and speed controllers. See also pid and the default parameters for each motor.	Ultrasonic Sensor	
stalled()				distance silent=False	Measure the distance e) between the sensor and an object using ultrasonic
()					sound waves.
run_until_stalled (speed, stop t-		stall_time) TouchSensor		presence()	Check for the presence of other ultrasonic sensors by detecting ultrasonic sounds.
ype=Stop.C-	ype=Stop.C- velocity) until it stalls.		turns true or false		
OAST, duty_l- imit=default)	The motor is considered stalled when it cannot move even with the maximum torque.	pressed Ref	in the or idise

Gyroscopic Sensor	
speed()	Get the speed (angular velocity) of the sensor.
angle()	Get the accumulated angle of the sensor.
reset_angle (angle)	Set the rotation angle of the sensor to a desired value.

parameters	;
Port	
Direction	
Stop	
Color	
Button	
Align	
ImageFile	Information, LEGO, Objects and Eyes
SoundFile	Expressions (CHEERING etc.,), Information, Commun- ication, Movements, Color, Mechanical, Animals, Numbers and System

Tools	
print (value,, sep, end, file, flush)	Print values on the terminal or a stream.
wait(time)	Pause the user program for a specified amount of time.

By FLL Tech Tacos (filtech2019)

cheatography.com/flltech2019/

Tools (cont)		
Stop-	A stopwatch to measure time	
Watch	intervals. Similar to the stopwatch	
Class	feature on your phone.	
	Supported Methods:	
	time, pause, resume, reset	

robotics	
DriveBase	Class representing a
(left_motor,	robotic vehicle with two
right_motor,	powered wheels and
wheel_dia-	optional wheel caster(s).
meter, axle_t-	
rack)	

robotics Methods	
drive (speed, steering)	Start driving at the specified speed and turnrate, both measured at the center point between the wheels of the robot.
drive_time (speed, steering, time)	Drive at the specified speed and turnrate for a given amount of time, and then stop.
stop (stop_type=Stop.COAST)	Stop the robot.
