

### FUNCTION

Functions are named blocks of code,

A simple function

```
def greet_user(): " " " Display a simple greeti ng." " " print( " Hel lo! ") g  
reet_user()
```

designed to do one specific job. Information passed to a function is called an argument, and information received by a function

is called a parameter

### Variables and Strings

Variables are used to store values. A string is a series of characters, surrounded by single or double quotes.

Hello world

```
print( " Hello world! ")
```
