

Intro

This little guide is for my new notebook.

It should make my work with my setup easier, it doesn't have to be a complete list for you.

The Linux version used is ArchLabs. Most commands should also run with Arch.

software management

`yaourt -Ss [keyword]` Search for software by keyword

`yaourt -S [software name]` install software

network setup

`nmcli connection show` show all known connections

`nmcli connection modify [connection name] wifi.cloned-mac-address permanent` use physical mac address for this network

`nmcli connection modify [connection name] wifi.cloned-mac-address random` use random mac address for this network

`nmcli connection modify [connection name] wifi.cloned-mac-address stable` use a stable and hashed MAC address for this network

`ip a s` show all IPs

network setup files

`/etc/NetworkManager/conf.d/`

30-mac-randomization.conf

```
[device-mac-randomization]
# "yes" is already the default for scanning
wifi.scan-rand-mac-address=yes
[connection-mac-randomization]
ethernet.cloned-mac-address=random
wifi.cloned-mac-address=random
```

31-ipv6-randomization.conf

```
[connection]
ipv6.ipv6-privacy=2
```
