

Variables

<code>let x = 10;</code>	block scope	most used
<code>const MAX = 100;</code>	constant values	
<code>var y = 10;</code>	global or function scope	old usage

Operators

<code>let x = 10;</code>	assignment
<code>x == "Hello"</code>	comparison
<code>x === "Hello"</code>	strict comparison
<code>&&</code>	logical AND
<code> </code>	logical OR
<code>!</code>	logical negation

Data Types

<code>let num = 10;</code>	Number
<code>let str = "Hello";</code>	String
<code>let isTrue = true</code>	Boolean
<code>let arr = [1, 2, 3]</code>	Array
<code>let obj = { a:1, b:2, c:"three" }</code>	Object

Array

<code>let array = ["a", "b", "c", "d", "e"]</code>	array definition
<code>array.length //5</code>	number of elements in array
<code>array[0] // a</code>	access the first element
<code>array[n] // 0 <= n < lenght of array</code>	access n th element
<code>array[5] // error</code>	5 grater then length of array
<code>array[array.length - 1] // e</code>	access the last element

Object usage

<code>object.name // Alice</code>	dot notation
<code>object["name"] // Alice</code>	property access notation
<code>object.age // 30</code>	
<code>object.gender // undefined</code>	non-existent property

Functions

```
function greet() {
    console.log( " Hello")
}
```

function definition

try...catch...finally

```
try{
    //code might throw an error
} catch(err) {
    console.error("Error occurred",
err.message);
} finally {
    console.log( " Operation comple ted ");
}
```

try: This block contains code that might throw an exception (an error)

catch: This block handles the exception if an error occurs in the try block

finally: This block always executes, regardless of whether an error occurs or not

Object

```
let object = {
    name: " Alice",
    age: 30
}
```

Unlike JSON, a JavaScript object does not have double quotes (") in the property name
