## DHCP commands engl Cheat Sheet by fuestc16 via cheatography.com/100707/cs/22479/

| DHCP Commands   |   | IPv6 Commands (if commands are not accepted) |  | VLAN Befehle   |   |
|---|---|--|--|--|---|
| ip dhcp excluded-address <IP>                                 | Exclude IP addresses  | show sim prefers                             | encapsulate dot1q <vlan>   | Aktiviert dot1q encapsulation für ein VLAN                           |   |
| start> <IP end>   |   | sdm prefer dual-ipv4-and-ipv6 default        | switchport mode trunk  | Wechselt den Switchport Mode zu Trunk                                |   |
| ip dhcp pool <name>   | Create a DHCP pool  | do reload                                    | switchport mode access   | Wechselt den Switchport Mode zu Access                               |   |
| network <IP> <SNM>  | Network address of the pool   | VLAN   | switchport trunk allowed vlan <VLAN ID>                          | Gibt das VLAN an für welches der Traffic vom Trunk Port drüber läuft |   |
| default-router <IP>   | Default gateway of the pool   | encapsulate dot1q <vlan>                     | Specifies the VLAN for which this trunk port will carry traffic  | switchport access vlan <VLAN ID>                                     | Gibt das VLAN an für welches der Traffic vom Access Port drüber läuft |
| dns-server <IP>   | DNS server of the pool  | switchport mode trunk                        | Specifies the VLAN for which this access port will carry traffic | switchport trunk native vlan <VLAN ID>                               | Definiert das Native VLAN   |
| domain-name <address>   | Sets domain name  | switchport mode access                       | switchport trunk native vlan <VLAN ID>                           | vlan <id>  | Erstellt ein VLAN   |
| ip helper-address <IP>  | Configures an ip helper address   | switchport trunk native vlan <VLAN ID>       | (no) shutdown  | name <name>  | Setzt einen Namen für das VLAN  |
| ip address dhcp   | Configures interface to receive IP addressing from DHCP                                     | vlan <id>                                    | Creates VLAN   | ip address <IP> <SNM>  | Setzt eine IP für das VLAN  |
| lease <time>  | Sets lease time   | name <name>                                  | Start or shut down   | (no) shutdown  | Fährt es rauf oder runter   |
| ipv6 nd managed-config-flag                                   | Sets the managed address configuration flag   | ip address <IP> <SNM>                        | show vlan  | show   | Zeigt alle VLANS  |
| ipv6 nd other-config-flag                                     | Configures the hosts to use stateful autoconfiguration to get non-IP-v6-address information | (no) shutdown                                | show interfaces switchport                                       | interfaces   | Zeigt Informationen über die Switch Port Interfaces                   |
| ipv6 dhcp server <Poolname>                                   | Enables DHCPv6 on an interface.   | show vlan                                    | Shows all VLANS  | switchport   |   |
| ipv6 dhcp relay destination <IPv6 /prefix-length> <interface> | Determines relay agent  | show interfaces switchport                   | Displays information about all the switch port interfaces        |  |   |
| show ip dhcp pool   | Shows dhcp pools  | PC commands                                  |  |  |   |
| show ip dhcp binding  | Verifies bindings   | ipconfig /all                                | shows details about all network adapters                         |  |   |
| show ip dhcp server statistics                                | Shows statistics  | ipconfig /renew                              | Wants to have new IP address                                     |  |   |

## PC Befehle

|                 |   |
|-----------------|---|
| ipconfig /all   | Zeigt Informationen über alle Netzwerkadapter |
| ipconfig /renew | Befehl um eine neu IP Adresse zu bekommen     |

## Sollten IPv6 Befehle nicht angenommen werden

show sim prefers  
sdm prefer dual-ipv4-and-ipv6 default  
do reload

## DHCP Befehle

|   |   |
|---|---|
| ip dhcp excluded-address <IP> start <IP> end <IP> | Nimmt einen gewissen Adressbereich raus                                     |
| ip dhcp pool <name>                               | Erstellt einen DHCP Pool  |
| network <IP> <SNM>                                | Setzt IP des Pooles   |
| default-router <IP>                               | Setzt Default Gateway des Pooles  |
| dns-server <IP>                                   | Setzt DNS-Server des Pooles   |
| domain-name <address>                             | Setzt Domain des Pooles   |
| ip helper-address <IP>                            | Bestimmt einen IP-Helper  |
| ip address dhcp                                   | Konfiguriert ein Interface so, dass es ihre IP Adresse mittels DHCP bezieht |
| lease <time>                                      | Setzt die Leasezeit   |

|                             |  |
|-----------------------------|--|
| ipv6 nd managed-config-flag | Setzt das managed address configuration flag |
|-----------------------------|--|

## DHCP Befehle (cont)

ipv6 nd other-config-flag Konfiguriert den Host so, dass er stateful autoconfiguration benutzt um non-IPv6-address information zu erhalten

ipv6 dhcp server <Po-olname> Aktiviert DHCP auf einem Interface

ipv6 dhcp relay destin-ation <IPv6 /prefix-leng-th> <interfac-e> Bestimmt einen Relay Agent

show ip dhcp pool Zeigt DHCP Pools

show ip dhcp binding Zeigt alle DHCP bindings

show ip dhcp server statistics Anzeigen von DHCP Statistik
