1.1 Syntax and Structure

Print Statement

JavaScript uses console.log() to output information to the console. You can print strings, variables, or the result of calculations.

```
consol e.l og( " Hello, World! ");  // Outputs: Hello, World!
```

Comments

JavaScript supports single-line comments (//) and multi-line comments (/ /).

`// Single-line comment

/*

Multi-line comment

spanning multiple lines.

*/`

1.2 Comments

JavaScript supports single-line comments (//) and multi-line comments (/* */). javascript Copy code

```
// Single-line comment

/*
Multi-line comment
spanning multiple lines.
*/
```
