Create ColdBox App `coldbox create app <template>`

Create ColdBox App Wizard `coldbox create app-wizard`

ColdBox Template <https://coldbox.ortusbooks.com/getting-started/installation>

Descriptions

Misc

CommandBox Properties File `commandbox.properties`
(must be in same directory as exe)

Specify CommandBox Home `commandbox_home=Z:\\C-ommandBox\\CommandBox-Files`

Play Snake `snake`

CommandBox Bullet Train `install commandbox-bullet-train`

CFConfig

Description This is a CommandBox module that provides a CLI for reading, writing, and storing configuration for all CF engines.

URL <https://forgebox.io/view/commandbox-cfconfig>

Install `box install commandbox-cfconfig`

Update `box update --system`

View all configuration `cfconfig show`

Export config from a server `cfconfig export myConfig.json`

Import config to a server `cfconfig import myConfig.json`

Set a configuration setting `cfconfig set adminPassword=commandbox`

Ngrok

Description Ngrok is a service that will proxy a locally-running server to the Internet where any coworker, friend, or client with a browser can view the local site you have running. Use this to demo a new site or ask a friend to look at an error for you. This is also great for testing integration with 3rd party systems (like Stripe webhooks) while still developing on localhost!

Documentation <https://forgebox.io/view/box-ngrok>

Install `box install box-ngrok`

Ngrok (cont)

Start a share	server share start
Stop a share	server share stop
Start sharing - server already running	share
Stop sharing - server already running	share stop
