

Binding

One Way Binding	<code><h1>{{pageTitle}}</h1></code>
Two Way Binding	<code><input [(ngModel)]="customer.FirstName"></code>
Property Binding	<code></code>
Attribute Binding	<code><button [attr.aria-label]="ok">Ok</button></code>
Class Binding	<code><div [class.Selected]="Selected">Selected</div></code>
ngClass	<code><div [ngClass]="setClasses()"> {{customer.name}} </div></code>
Style Binding	<code><button [style.color]="isSelected ? 'red' : 'white'"></code>
ngStyle	<code><div [ngStyle]="setStyles()"> {{customer.name}} </div></code>
Component Binding	<code><customer-detail [customer]="currentCustomer"> <customer-detail></code>
Directive Binding	<code><div [ngClass] = "{selected: isSelected}">Customer</div></code>
Event Binding	<code><button (click)="save()">Save</button></code>
\$event	<code><input [value]="customer.name" (input)="customer.name=\$event.target.value"></code>

Pipes

Upper Case	<code><p>{{customer.name uppercase}}</p></code>
Lower Case	<code><p>{{customer.name lowercase}}</p></code>
Date	<code><p>{{orderDate date:'medium'}}</p></code>
Date Format	<code><p>{{orderDate date:'yMMMd'}}</p></code>
Currency	<code><p>{{price currency}}</p></code>
Percent	<code><p>{{taxes percent:'1.1-1'}}</p></code>
Number	<code><p>value number:'1.1-2'}}</p></code>
JSON Debugging	<code><pre>{{Customer json}}</pre></code>

Lifecycle Hooks

OnInit	<code>export class Customer implements OnInit { ngOnInit() {} }</code>
OnChanges	<code>export class Customer implements OnChanges { ngOnChanges() {} }</code>
AfterViewInit	<code>export class Customer implements AfterViewInit { ngAfterViewInit() {} }</code>
OnDestroy	<code>export class Customer implements OnDestroy { ngOnDestroy() {} }</code>

Component with Inline Template

```
import { Component } from '@angular/core';
@Component({
  moduleId: module.id,
  selector: 'customer',
  template: `
    <h3>{{customer.name}}</h3>
  `
})
export class CustomerComponent {
  customer = { id: 100, name: 'John Smith' };
}
```

Structural Directives

```
*ngIf <div *ngIf="currentCustomer">
  Selected {{currentCustomer.Name}}
</div>
```

```
*ngFor <ul>
  <li *ngFor="let customer of customers">
    {{ customer.name }}
  </li>
</ul>
```

```
*ngSwitch <div [ngSwitch]="orderStatus">
  <template [ngSwitchCase]="purchased"></template>
  <template [ngSwitchCase]="shipped"></template>
  <template [ngSwitchDefault]></template>
</div>
```

Service

```
//Example: customer.service.ts
import { HttpModule } from '@angular/http'
@Injectable()
export class CustomerService {
  constructor(private http: Http) { }
  getCustomers() {
    return this.http.get('api/customers')
      .map((response: Response) =>
        <Customer[]>response.json().data)
      .catch(this.handleError);
  }
  private handleError(error: Response) {
    console.error(error);
    return Observable.throw(error.json().error ||
'Service error');
  }
}
```

Service (cont)

```
}
```

Injecting a Service

```
//Example: customer-list.component.ts
export class CustomerListComponent {
  customers: Customer[];

  constructor(private customerService:
CustomerService) { }
}
```

Component Linked Template

```
import { Component } from '@angular/core';
@Component({
  moduleId: module.id,
  selector: 'customer',
  templateUrl: 'customer.component.html',
  styleUrls: ['customer.component.css']
})
export class CustomerComponent {
  customer = { id: 100, name: 'John Smith' };
}
```
