rm [-rf]<File or directory Path>	Remove file (-r for directories)
ll <Directory Path>	List files and directoris
ls [-ltrh] <Directory Path>	List files and directoris (comprehensive)
stat <File Path>	Display file or file system status
fsort <Directory Path>	Sorted List
du [-sh] <Directory Path>	Estimate file space usage (Human readable)
tar [-zxvf] <File Path>	z:Gzip j:Bzip2 -v:Verbose x:Extract c:Create f:file
wget <http or https link>	Network downloader
set-perms [-v -vv] DOMAIN	Change Permission
zip [-r] <File Name> <Directory to store>	Compress file of Folder
unzip <File Name> <Directory to Extract>	Extract Zip file
dsu-new-snapshot	Disk Space Usage Summary
dsu-view-snapshot	Disk Space Usage (In the form of a table)
gdrvdl <Google Drive link>	Download from GoogleDrive
docroot <Domain name>	Home direcotry for specify domain

DNS Managment

dns-add-zone-rec	-n domain.com. -t A -v "195.28.10.117" domain.com
dns-delete-zone-rec	-n domain.com. -t A -v "195.28.10.117" domain.com
dns-edit-zone-rec	-n domain.com. -t A -v "195.28.10.117" domain.com
dns-scan-zone <Domain>	Display SPF Records
dns-cat-zone <Domain>	Display domain zone
zone-cat <Domain>	Display domain zone

برای افزودن، حذف و تغییر رکورد های لازم است مطابق با مثال مقادیر را به ترتیب وارد فرمایید

در زمان ایجاد رکورد لازم است کاراکتر نقطه در انتهای نام دامنه درج شود

CMS

wp-home	Display the home page of the website
wp-plugins	Display WordPress site plugins
wp-theme	Display Active theme of the WordPress website

Cheking website

dig <Rec Type> <Domain> {<@ns.netafraz.com>}	Check published DNS records
ip2l <IP>	IP location
ipcheck <IP>	Display location, time-zone, SMTP hostname, Reverse record
whois <Domain>	Whois Service
curl -I <Domain/Link>	load and transfer a URL
lurl <Domain/Link>	Load from server side without using DNS service
timeout -k 2 2 telnet <Domain> 21	Dispaly Reverse DNS record

Backups

list-backup-archives	List of direct admin configuration backups
bk-list-weekly-archives	List of direct admin configuration backups
mk-backups-dir <Username>	Create a backups directory for user
cptoda-dump <Filename>	Display information available in Cpanel backup
backup-mount	Mount the direcotry related to weekly backup
backup-umount	Unmount the direcotry related to weekly backup
da-restore-user-backup <Filename>	Restore direct admin backup
weekly_backupdir	Weekly backup path

Database

db-list	Databases List
db-info <DATABASE>	Display information of database tables
importdb <DATABASE> <SQL_FILE>	Import SQL file to specified Database
backupdb <DATABASE> <SQL_FILE>	Export Database to SQL File

Database (cont)

db-create [-s]	Create Database by random password
db-drop <DATAB-ASE>	Delete Database
cms-dbpasswd [wp, jm]	Reseting database password of a known CMS
cms-dbdump [wp, jm]	Display database parameters of a known CMS

Domain

dm-list	Display the list of domains
dm-create <Domain name>	Add new domain
dm-delete <Delete name>	Delete a domain
dm-owner <Domain name>	Display usernames that use this domain or subdomains based on this domain
dom-rename <OLD_DOMAIN> <NEW_DOMAIN>	Change domain name
dmsetphpver <DOMAIN> <PHPVER>	Changing the php version of the domain
dmshowconf <DOMAIN>	View Domain Settings
dm-wellknown <DOMAIN> [on/off]	Create access to the .well-known directory
ttlset <DOMAIN> 100	Set domain ttl value to 100
usr-chttl <UserName> >100	Set all domain's ttl value to 100
dmnginxstatic <DOMAIN> [on/off]	Disable static request from Nginx web server side
dm-contact-forms-geolimits <DOMAIN> [on/off]	Activating access to Contact-Forms from abroad
dm-set-wp-geolimits <DOMAIN> [on/off]	Activating access to Wordpress dashboard from abroad

Email-Accounts

mailadd <EMAIL_ACCOUNT>	add an email account
mailmod [OPTIONS] <EMAIL_ACCOUNT>	modify an email account
mailrm <EMAIL_ACCOUNT>	remove an email account
mailsus <EMAIL_ACCOUNT> [on/off]	Suspend an email account
maills	Display the list of created emails

Direct admin

usr-inc-traffic	Increase bandwidth by 10%
usr-quota	Free disk and inode capacity
usr-pkg	Account Summary information of the Direct Admin panel
npsp-show-conf	Open ports and service connection restrictions
npsp-ftp	ftp access via php
da-msg	Display direct admin messages
catcust <Domain>	Display custom Apache config
cpi-cat	Check active modules (Memcached)
php-extention list	Display the list of php modules that can be activated
php-extention <php modules name> [on/off]	php module activation
ftp-acl add <USER> perm <IP>	Add IP to connect to FTP from abroad permanently
ftp-acl add <USER> temp <IP> {Hours}	Add IP to connect to FTP from abroad temporarily by hours
respkg	Information about reseller users
userdom <Domain>user	Convert username to domain and vice versa
userdom <Username>	Convert username to domain and vice versa
userips	Display Web IP

دستور افزایش پهنای باند تنها در مواقعی اعمال شده که پهنای باند سرویس کاربر به اتمام رسیده باشد
