

### Basic

```
struct.pack(format, v1, v2, ...)  
struct.unpack(format, string)  
struct.pack_into(format, buffer, offset, v1, v2, ...)  
struct.unpack_from(fmt, buffer[, offset = 0])
```

### Examples

```
pack('hhl', 1, 2, 3)          b'\x00\x01\x00\x02\x00\x00\x00\x03'  
unpack('hhl', b'\x00\x01\x00\x02\x00\x00\x00\x03') (1, 2, 3)
```

### Byte Order

```
@      native  
=      native  
<      little-endian  
>      big-endian  
!      network (= big-endian)
```

### Format Characters

c	char	1
b/B	signed/unsigned char	1
?	bool	1
h/H	signed/unsigned short	2
i/I	signed/unsigned int	4
l/L	signed/unsigned long	4
q/Q	signed/unsigned long long	8
f	float	4
d	double	8
s	bytes
