

01 Starting a project

<pre>git init [project name]</pre>	Create a new local repository in the current directory names [project name] .
<pre>git clone <project ssh url></pre>	Downloads a project with the entire history using the SSH URL from GitLab.

02 Make a Change

<pre>git status</pre>	Displays the status of your working directory. Options include new, staged, and modified files. It will retrieve branch name, current commit identifier, and changes pending commit.
<pre>git add [file]</pre>	Add a file to the staging area. Use . in place of the full file path to add all changed files from the current directory down into the directory tree.
<pre>git add .</pre>	Stage all files
<pre>git commit -m "commit message"</pre>	Create a new commit from changes added to the staging area. The commit must have a message!
