## Physics - WAVES Cheat Sheet by Imaan2907 via cheatography.com/70996/cs/18008/

Types of Waves	
Transverse	Longitudinal
Particles vibrate perpendicular to the direction of energy transfer	
Examples: sound waves, seismic waves	
Describing Waves	
Amplitude - height of wave from	n Speed = frequency x
middle to peak/trough	wavelength
Amplitude is the maximum displacement of a wave	
Time period - time it takes for 1	Time period -
complete wave	1/frequency
Frequency - number of waves that travel past a point in 1	
second	
The lower the frequency, the longer the time period
