Iliohypogastric Nerve

Lateral fem	oral cutaneous nerve
Nerve Supply	Sensory Innervation
L2 + L3	Skin over anterolateral thigh and lateral knee
* This nerv	e is associated with Meralgia

Paresthetica = the compression of the Lateral femoral cutaneous nerve as it passes through the inguinal ligament. *Causes shooting pain down the lateral aspect of the thigh

*Common in gymnasts, scuba divers = when clothing is too tight and compresses inguinal ligament

Sciatic Nerve (Tibial Division)

Nerve Supply	Motor Innervation	Sensory Innerv- ation
L4-S3	Muscles of the posterior thigh (Hamstring muscles: biceps femoris, semimembranosus and semitendinosus) and hamstring portion of adductor magnus + muscles of the posterior leg (Gastrocnemius, Soleus, Tibialis Posterior, Flexor Digitorum Longus, Flexor Hallucis Longus, Popliteus	Innervates the skin of the posterola- teral leg, lateral foot and the sole of the foot.
* The pri	mary action of these mu	scles is

PLANTARFLEXION of the foot.

1. Tarsal tunnel syndrome

- 2. "claw foot" (hyperext MTP, flex IP)
- 3. Inability to plantar flex and invert = slap

and vastus and foot intermedius) (saphenous nerve). Common Fibular/Peroneal Nerve (Sciatic Nerve)

side of the leg

vastus medialis

Nerve	Motor	Sensory
Supply	Innervation	Innervation

Common Fibular/Peroneal Nerve (Sciatic Nerve) (cont)

L4-	Short head of biceps	Superficial
S2	femoris. The superficial	fibular
	fibular nerve innervates	nerve:
	the muscles of the	Innervates
	lateral compartment of	the skin of
	the leg; fibularis longus	the antero-
	and brevis (foot	lateral leg,
	eversion). The deep	and
	fibular nerve innervates	dorsum of
	the muscle of the	the foot
	anterior compartment of	(except
	the leg; tibialis anterior,	the skin
	extensor digitorum	between
	longus and extensor	the first
	hallucis longus. These	and
	muscles act to dorsiflex	second
	the foot and extend the	toes).
	digits. It also innervates	Deep
	some intrinsic muscles	fibular
	of the foot.	nerve:
		Innervates
		the skin
		between
		the first
		and
		second
		toes.
Dysfi	unction of CFN:	
Foot	Drop (inability to dorsiflex t	he ankle)
Pres	entation	
L P		

 High stepping gait to prevent scraping toes

 Cant evert foot on uneven surfaces Causes

Herniated disc compressing L5 = foot drop Knee dislocation = foot drop Lateral blow/trauma to the head of fibula= foot drop

Compensate by exaggerated hip and knee flexion (+ external rotation) to avoid dragging the toes along the ground

L1 + L2 Skin over external genitalia and lateral femoral triangle	t	
Obturator Nerve		
Obturator Nerve		
Nerve Motor Innervation Sens Supply inner ation	,	
L2 - L4 Innervates the muscles the sl of the medial compar- tment of the thigh media (obturator externus, adductor longus, adductor brevis, adductor brevis, adductor magnus and gracilis).	al	
Superior Cluteal Nerve		

Pudental Nerve		
Nerve	Motor Innerv-	Sensory Innerv-
Supply	ations	ation
S2-S4	innervates	innervates the
	various pelvic	external
	muscles, the	genitalia of both
	external	sexes and the
	urethral	skin around the
	sphincter and	anus, anal
	the external	canal and
	anal sphincter.	perineum
A pudendal nerve block is a form of		
analgesia	a occasionally give	en before vaginal
childbirth, episiotomy and other minor		
vaginal procedures.		
Epidural	targets S2-S4	

Superior Gluteal Nerve

Nerve	Motor Innervation
Supply	
L4-21	Superior to piriformis and innervates the gluteus medius + minimus and Tensor Fasciae Latae

Inferior Gluteal Nerve

Nerve Supply	Motor Innervation
L5-S2	Exits inferior to piriformis and
	innervates gluteus maximus muscle only

Posterior Femoral Cutaneous Nerve Nerve Sensory Innervation Supply posterior regions of thigh, proximal part of leg, and skin of perineum

PFCN entrapment has posterior buttocks and thigh pain, from the gluteal fold to the back of the knee
